D85083.1 G1:2605607
DMS oxygenase component.
Acinetobacter sp. (strain:20B) DNA.
Acinetobacter sp. Marcebacteria; gamma subdivision; Pseudomonas group;
Moraxellaceae; Acinetobacter.
1 (bases 1 to 5552) 2 (sites)
Horinouchi,M., Kasuga,K., Nojiri,H., Yamane,H. and Omori,T.
Cloning and characterization of genes encoding an enzyme which
oxidizes dimethyl sulfide in Acinetobacter sp. strain 20B

Microorganisms transformed with P. cepacia PRI-23 Tom enzyme gene -
T are useful for degradation of chloro; aliphatic cpds. and aromatics
Sclaim 2; Column 19-28; 25pp; English.
The present sequence, isolated from peredomonas cepacia strain PRI-23, includes the gene(s) encoding follower ortho-monoxygenase, designated from. The Tom gene is present on a large self-transmissable plasmid denoted prow. The rayme is capable of degrading trichlorocthylene (TCE), a hazardous pollutant. The prow plasmid is transmissable and expressable in other bacteria, thus many bacteria can be genetically altred to constitutively degrade TCE, esp. in blorocactors or recentantmated environments. P. cepacia PRI-23 contg. prow does not need exogenous chemical inducers and is capable of functioning under a diverse set of conditions. Also it does not require an inducer that is a co-substrate for the enzyme required to break down TCE, in effect, it is consubstrate for the enzyme required to break down TCE, in effect, it is sequence 9785 BP; 2255 A; 2697 C; 2815 G; 2048 T;

Gene recombinant decomposing chlorinated ethylene - has a promoter inserted upstream of a phenol hydroxylase gene bisclosure; ageg 8-10; 12pp; Japanese.

Disclosure; ageg 8-10; 12pp; Japanese.

The present sequence represents a phenol hydroxylase genomic DNA sequence isolated from Pseudomonas putida strain KWI-9. The invention relates to a recombinant gene carrying a recombinant DNA in which a promoter is. Inserted upstream of a phenol hydroxylase gene decruposing activity.

The said phenol hydroxylase gene is a gene gp. consisting of chlorinated ethylene-decomposition promoting gene and chlorinated ethylene-certifier ethylene-decomposition of chlorinated composing gene gp. and carries said recombinant DNA on a chromosome.

The invention also provides a method for the decomposition of chlorinated ethylene using the above gene recombinant. The gene recombinant gives a high decomposition of chlorinated ethylene per microbe body. The method decomposition of chlorinated ethylene per microbe body. The method decomposition of chlorinated ethylene general services a chlorinated ethylene efficiently under aerobical condition.

This sequence represents the Pseudomonas putida strain KWI-9 pheZ, pheA, pheB, pheD, pheB coding sequence. The invention relates to a gene recombinant capable of decomposing chlorinated ethylene characterised by that a recombinant DNA in which a DNA fragment having a function of stopping transcription of a gene is inserted downstream of a chlorinated ethylene-decomposing gene derived from a microbe having chlorinated ethylene-decomposing activity is cariled on a chromosome. The gene recombinant gives a high decomposition of chlorinated ethylene body. It also decomposition of chlorinated ethylene per microbe body. It also decomposes chlorinated ethylene efficiently under aerobic condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              681

T17418 is the Nocardia corallina strain B-276 alkene mono-oxygenase gene. It encodes 4 protein products amob, amoB, amoC and amoD aderived from the 3 different reading frames of the operon. The gene is useful for the production of indigo via oxidation of indole.

E.coli transformed with this DNA sequence are able to catalyse the epoxidation of alkenes. The DNA is derived from Nocardia corallina and comprises 4 open reading frames. ORFs amoA and amoC encode subunits 1 and 2 of the alkene monoxygenase enzymes and ORF amoD encodes a reductase capable of transferring electrons from NADH

Microorganisms transformed with P. cepacia PR1-23 Tom enzyme geneare useful for degradation of chloro:aliphatic cpds. and aromatics claim 2; Column 19-28; 25pp: English.

The present sequence, isolated from Pseudomonas cepacia strain PR1-23, includes the gene(s) encoding toluene ortho-monooxygenase, designated bloreactor; pollutant; encodes nucleotide; encodes /transl_except= (6026. .6027, aa:Ala) /note= "apparent deletion of nucleotide; encodes οŧ Ala-Arg; apparent deletion /note= "no start or stop codons included; W06805" /transl_except= (5116. .5117, aa:Ala) /note= "apparent deletion of nucleotide" 5133. .5135 aa:Glx) DNA encoding toluene ortho-monooxygenase.

tom. The Tom gene is present on a large self-transmissable plasmid denoted prow. The enzyme is capable of degrading trichloroethylene (TCE), a hazardous pollutant. The prow plasmid is transmissable and expressable in other bacteria, thus many bacteria can be genetically altered to constitutively degrade TCE, esp. in bloreactors or TCE-contaminated environments. P. cepacia PRI-23 contg. prow does not need exogenous chemical inducers and is capable of functioning under a diverse set of conditions. Also it does not require an inducer that is co-substrate for the enzyme required to break down TCE, in effect, it it is subject to competitive inhibition.

The plasmid allows for the expression of metapyrocatechase under the control of a promoter/operator from the TOL plasmid of Pseudomonas putida, in an E.coli expression system with an ampicillin resistance marker. The 5'-terminal overhangs it's comipement by AATT- the 3'-terminal is overhung by TTAA.

Claim 7: Page 477-9; 30pp; Japanese.
The sequence is a component of the synthetic circular DNA which ma transform an E.coli host for the expression of metapyrocatechase. The metapyrocachase gene is linked to the 3/terminal of the PL promoter (N60853) having the amp r gene at it's own 3/terminal. The product is useful in production of important organic

Claim 7, Page 477-9; 30pp; Japanese.
The sequence is a component of the synthetic circular DNA which ma transform an E.coli host for the expression of metapyrocatechase.
The metapyrocachase gene is linked to the 3'terminal of the PL
                                                                                                                                                                                                                  ctcaccatgggtgtgatgcgtattggtcatgt'cagtctgaaggtgatggacatggaagcg

C2,3-O has uses in the food industry, the pharmaceutical industry, the cosmetics industry and as a disinfectant. It converts catechols to aldehydes. The inventors claim a plasmid vector carrying at least the xylE gene and a promoter for the expression of the gene in a foram positive bacteria, pref. Bacillus subtilis.

Sequence 958 BP; 211 A; 270 C; 276 G; 201 T;

Callected against teleast 2 marks selected from target genes, coding and care directed against at least 2 marks selected from target genes, coding and non-coding regions of RNAs corresponding to target genes, coding and non-coding regions, intron-exon borders, the formation codons, genomic flanking regions, intron-exon borders, the composition and all segments of RNAs encoding proteins associated with one corresponding to regions and all segments of RNAs encoding proteins associated with one corrected from sequences X55272-74. These multiple target colligonucleotides (specifically X55180-27) can be used for the antisense treatment of diseases and conditions of are those associated with impaired respiration and inflammation, inflammation, are those associated with impaired respiration and inflammation, allergic rhintis, acute asthma, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary usoconstriction, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukemias, lymphomas, cancer, hepatocellular carcinoma, kidney cancer, melanoma, hepatic metastasized to the lungs, including breast and prostate cancer.

The specification describes antisense oligonucleotides (X52869-X55271)

The specification describes antisense oligonucleotides (X52869-X55271)

The specification describes antisense oligonucleotides (and the last 2 mRNAs selected from trarget genes, coding and on-coding regions of RNAs corresponding to target genes, gene initiation codons, genomic flanking regions, intron-exon borders, the 5'-and, the 3'-end and the juxta-section between coding and non-coding cregions and all segments of RNAs encoding proteins associated with one or more diseases, conditions or mixtures. The antisense oligonucleotides (specifically X55272-74. These multiple target creatment of diseases and conditions. Typical diseases and conditions are those associated with impaired respiration and inflammation, and the first coding and allergies, asthma, impeded respiration, claiming the creatment of diseases, pulmonary vasoconstriction, inflammation, creatment distracts syndromers allergies, pulmonary converses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 hypertension, pulmonary vasconstriction, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukemias, lymphomas, carcinomas e.g. colon cancer, breast cancer, lung cancer, pancreatic cancer, hepatocellular carcinoma, kidney cancer, melanoma, hepatic metastases, as well as all types of cancers which may metastasize or have metastasized to the lungs, including breast and prostate cancer. Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information pleases see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of

Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRi digestion of Drosophila DNA provided by the BDGP from the Isogenic strain y2; on bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           - Web : www.genoscope.cns.fr) Determination of this BAC-end sequence was carried out as part of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Drosophila melanogaster genome survey sequence TET3 end of BAC # BACR19016 of RPCI-98 library from Drosophila melanogaster (fruit fly), genomic survey sequence.

collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BAGs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Rosewell Park Cancer Institute in Buffalo. NY. The library is named RPCI-98 and was constructed by partial Ecorl digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2: on bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://dacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of collaboration with the Barkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.frulfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Gosegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila Plank Cancer Cantin 192; cn bw spp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscegawa and Aaron Mammoser in Pieter de Jóng's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the Isogenic strain y2: on bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cgagecegaegtgetggaggeggeeaaggegaeetggaeeegegaegeegeetggeagee 1049
